Certified Quality Management System

Indications

- Skin tone change due to aging
- Skin aging due to light
- Hyperpigmentation
- Acne and post-acne
- Hair loss
- Sensitive skin
- Seborrheic dermatitis

PRP-treatment requirements

PRP-treatment is provided in high quality by meeting following conditions and principles:

1. Use of the high quality special techniques:
 - Use of the unique and certified tubes of Swiss Plasma Biotech;
 - Use of a centrifuge with special advanced blending mode;
 - Use of the high quality consumables.
2. Application of the procedure by a physician trained in Swiss Plasma Biotech method.
3. Complying with the application procedure.

The process consists of many steps: Blood collection, centrifuge of the blood obtained from the applicant and injection.

Forehead and Brow Rejuvenation
Lower Eyelid Rejuvenation
Mid-Face Lift and Cheek Rejuvenation
Lower Face and Jaw Line Rejuvenation
Nasolabial Groove and Upper Lip Rejuvenation
Neck and Decolletage Rejuvenation

PRP treatment is based on the therapeutic properties of the one's own blood (platelet rich plasma). This platelet rich plasma contains a power blend containing many anti-aging agents, growth factors for cell rejuvenation and proteins, vitamins and amino acids, which support skin health and skin rejuvenation.

Injection of platelet rich plasma supports production of the collagen, elastin and hyaluronic acid, this provides a youthful and radiant appearance and reduces aging process and signs of fatigue.

Effects of the PRP Treatment

- Improvement in the skin tone and complexion
- Reduction in the wrinkles
- Nourishing of the skin with moisture and nutrients
- Acne and post-acne treatment
- Impediment of the skin aging processes and skin sagging
- Improvement in the stressed skin and elasticity
- Support of hair growth, decrease in hair loss
- Acceleration in skin rejuvenation after invasive treatment
- Improvement in micro circulation and metabolism

Advantages of PRP Treatment

- Natural appearance
- No allergic reaction
- No harmful ingredient
- No infection risk

PRP stimulates collagen and elastin production which thickens and tightens thinning skin, effectively smoothing wrinkles and fine lines. Because it boosts collagen, it's also a great treatment for improving overall skin texture and tone. It's particularly good for people who suffer from rosacea or acne.
